* Enefit notifies communications service providers of initial subscription period deadlines via contact persons and on its website. Prices are subject to applicable VAT

EXPLANATIONS:

- Termination point monthly charge. Charge billed under the fibre optic lease agreement.
- Connection from the basic network via the Enefit conduit. A fibre-optic connection from the transmission network branching joint to the Enefit access point. This is a one-time charge including connection to a single access point, including an optical splitter or multiple splitters at the access point.
- Switching charge to a new telecommunications service provider. The chargeable service applies when the end user changes their communications service provider after three months have passed since the completion of the site. The charge is applied to the communications service provider that orders the customer's reconnection from the existing provider's network to their own network. The charge includes one site visit, regardless of the number of customers being switched.
- Activation charge after the initial subscription period. The charge is applied if the end user(s) have not been activated at the time of site completion of the site or at least within three months after its completion. The charge includes one activation visit, regardless of the number of customers being activated.
- Charge for a false fault report. The charge for a false fault report applies if the communications service provider has reported a fault, but no fault is detected in the service provider's network.
